Keeping tech minds in balance

MindWatch
KEEPING TECH MINDS IN BALANCE

Proactive Mental Health Monitoring

MindWatch is a web-based tool that proactively monitors and analyzes employee mental health in the tech industry, using AI to integrate survey responses and work-related data to help organizations support well-being and reduce burnout

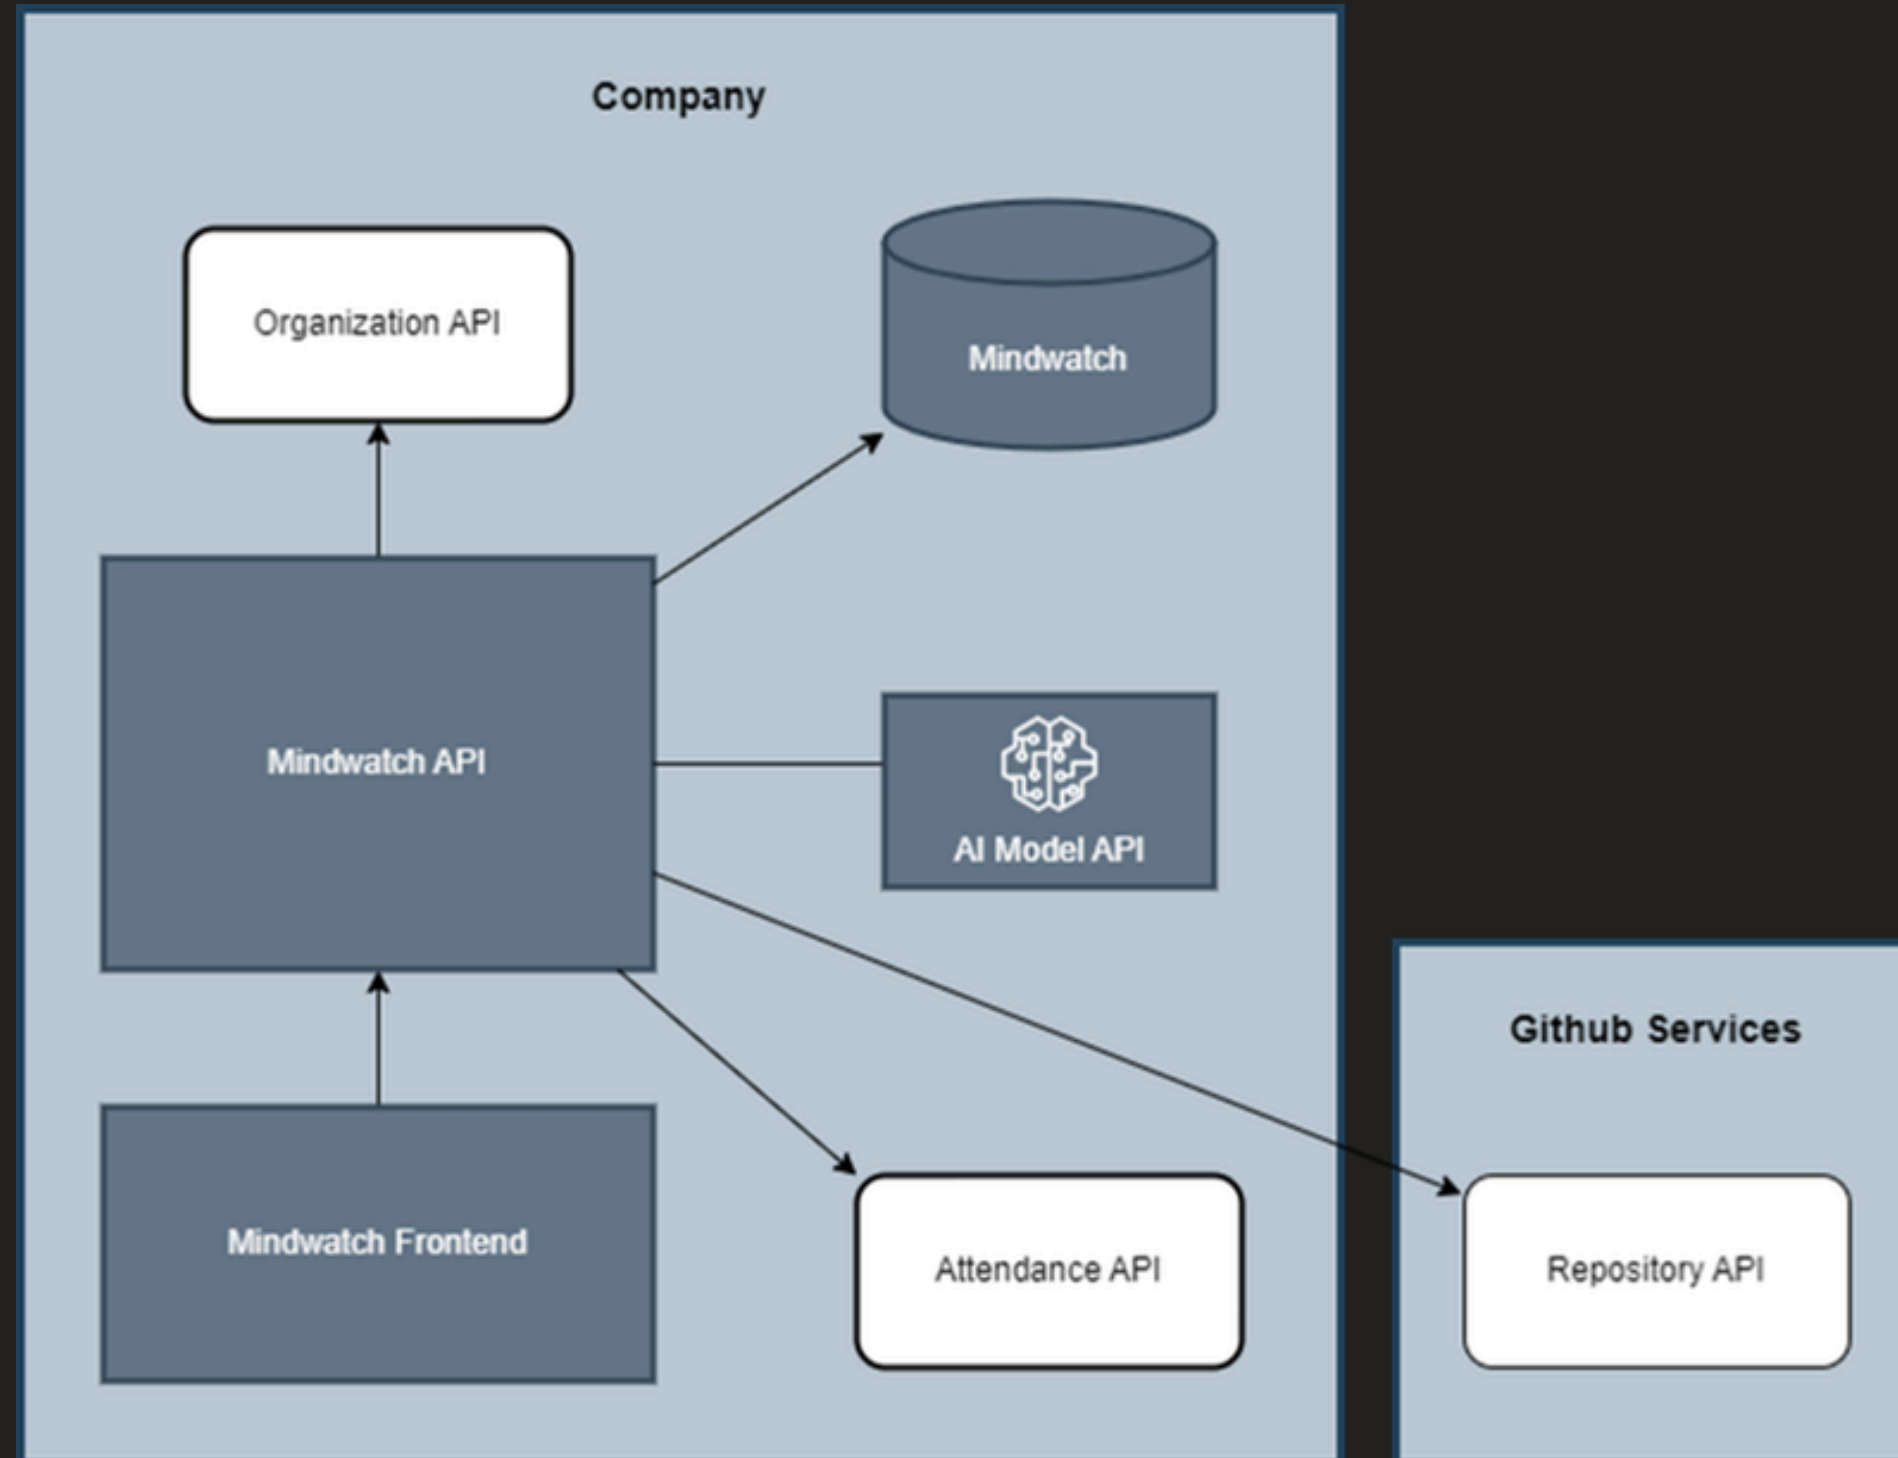

Introduction to the Industry Problem

- High-pressure environments
- Increased turnover, decreased productivity, higher healthcare costs

Current Gaps:

- Lack of scalable, confidential mental health tools tailored to the tech industry
- Limited actionable insights for HR teams

Architecture Overview

Organization: Delivery of employee data

AI Model: Analyses survey answers

Attendance API: Delivery of attendance data

Repository API: Delivery of Github information (commits)

Mindwatch API: Main gateway of the application

Mindwatch Frontend: interface for users

The logo features a dark blue globe in the background. Overlaid on the globe is a white shield with a cross inside. A white rounded rectangle is positioned to the right of the shield, partially overlapping it.

KEEPING TECH MINDS IN BALANCE

What Makes Our Project Distinctive

Schedule and customize surveys by department or role.

Generate detailed reports for HR

Fill out surveys anonymously

Send survey completion reminders

AI-based evaluation of mental health risks

Create incident reports.

AI-Driven Insights

- Algorithm (Logistic Regression)
- TF-IDF (Term Frequency-Inverse Document Frequency)
- MaxAbsScaler
- Dataset (80% training, 20% testing)
- SAGA solver (which is efficient for large and sparse datasets)
- Regularization was applied to prevent overfitting
